PROFESSIONAL SUMMARY

MS Data Science candidate with a Finance background and 1+ year of professional experience in financial and operational analytics. Combines business knowledge with hands-on experience in Python, SQL, Power BI, machine learning, NLP, and forecasting. Built applied data science projects using large real-world datasets, including SBA loan and news data.

TECHNICAL SKILLS

Programming & Data: Python (Pandas, NumPy), SQL, R

Machine Learning: Scikit-learn, Regression, Classification, Decision Trees, Random Forest, Gradient Boosting, XGBoost, SVM, Feature Engineering, Cross-Validation, Hyperparameter Tuning, Model Evaluation

NLP & Forecasting: TF-IDF, Sentence Transformers, Text Classification, Topic Modeling, SARIMA, Prophet

Analytics & Visualization: Power BI, Excel, EDA, Statistical Analysis, Hypothesis Testing, KPI Reporting

Business & Domain: Financial & Operational Analytics, Financial Analysis, Forecasting, Budgeting, Variance Analysis, Reporting Automation

Tools: Jupyter Notebook, Google Colab, Git, GitHub

PROFESSIONAL EXPERIENCE

Finance Analyst | Jeelani Industries — Karachi, Pakistan — *November 2023 – December 2024*

- Analyzed financial and operational data using Python, SQL, Excel, and Power BI to automate monthly reporting workflows, reducing reporting preparation time by 30%.
- Built KPI dashboards and performed variance analysis to support operational planning, financial reporting, and data-driven business decision-making.

Founder & Finance Manager | TD Enterprise — Karachi, Pakistan — *September 2018 – August 2022*

- Used Excel, SQL, and Power BI to analyze pricing, revenue trends, and business performance metrics, helping to grow the client base by 30% through data-driven decisions.
- Managed budgeting, reporting, and operational planning while improving delivery timelines by 25% through process optimization and performance tracking.

PROJECTS

SBA Loan Default Risk Prediction — *Python, Scikit-learn, Pandas, NumPy, Flask App — June - August 2026*

- Built an end-to-end ML pipeline covering data collection, preprocessing, feature engineering, model training, evaluation, and application development using 329,863 resolved SBA 7(a) loans (2014–2024) integrated with economic data.
- Developed and evaluated four classification models using a time-based train/test split and 5-fold cross-validation; tuned Gradient Boosting with RandomizedSearchCV, achieving 0.917 ROC-AUC and 0.758 PR-AUC on held-out test data.
- Developed a Flask application for scoring new loan applications, generating default probabilities and Low/Medium/High risk tiers with observed default rates of 1.6% / 4.7% / 41.1%.

News Headline Analysis — *Python, NLP, Scikit-learn, HDBSCAN, t-SNE, TF-IDF — May 2026*

- Classified 200K+ headlines into 11 categories using Sentence Transformers, achieving 82% accuracy and 0.79 F1-score and outperforming TF-IDF-based classification by 2%.
- Applied unsupervised clustering (K-Means, HDBSCAN) and t-SNE visualization to discover hidden topic patterns and emerging market themes; delivered Jupyter notebook with business insights.

DJIA Time Series Forecasting — *Python, SARIMA, Prophet, Pandas, Stats models — April 2026*

- Analyzed 10+ years of DJIA market data and compared SARIMA and Prophet using stationarity testing, ACF/PACF analysis, differencing, and forecast evaluation.
- Prophet outperformed SARIMA with RMSE of 1,519 and MAE of 1,283 compared to SARIMA RMSE of 2,839, demonstrating stronger long-range trend capture for financial market forecasting.

EDUCATION

Master of Science in Data Science | Drew University | Madison, NJ — *Expected December 2026*

Coursework: Machine Learning, Statistical Inference, Advanced SQL, Big Data Analytics, Artificial Intelligence

Bachelor of Science in Business Administration – Finance | Greenwich University | Pakistan — *September 2023*

Certifications: AI Fundamentals - IBM - [Verify](#) (Apr 2026) | Cloud Computing Fundamentals - IBM - [Verify](#) (May 2026)
