PROFESSIONAL SUMMARY

Finance professional turned data scientist, MS Data Science student at Drew University with hands-on experience building ML, NLP, and forecasting models across 3 self-initiated projects on 390K+ real-world records. Proficient in Python, SQL, Scikit-learn, and Power BI with a unique edge in financial data analytics gained through professional experience as a Finance Analyst. Available for Summer / Fall 2026 internship in Data Analytics or Data Science.

EDUCATION

Master of Science in Data Science — January 2025 – Expected December 2026

Drew University, Madison, NJ

Bachelor of Science in Business Administration – Finance — September 2023

Greenwich University, Karachi, Pakistan

TECHNICAL SKILLS

Programming Languages & Libraries: Python (Pandas, NumPy, Matplotlib, Seaborn, Plotly, Scikit-learn), R (dplyr, data.table, ggplot2), SQL

Tools & Platforms: Jupyter Notebook, Google Colab, VS Code, Power BI, Git, GitHub, AWS

Machine Learning & NLP: Supervised Learning (Linear Regression, Logistic Regression, SVM, KNN, Decision Trees, Random Forest, XGBoost), Unsupervised Learning (HDBSCAN, K-Means, Topic Modeling), Dimensionality Reduction (PCA, t-SNE), NLP (TF-IDF, BERT, XLNet), ML Techniques (Feature Engineering, Cross-validation, Hyperparameter Tuning, Model Evaluation)

Forecasting & Analytics: SARIMA, Prophet, EDA, Statistical Analysis, Hypothesis Testing, A/B Testing, KPI Reporting

Business & Domain: Financial Analysis, Forecasting, Budgeting, Variance Analysis, Reporting Automation

Certifications: AI Fundamentals - IBM - [Verify](#) (Apr 2026), Cloud Computing Fundamentals - IBM - [Verify](#) (May 2026)

PROJECTS

News Headline Analysis — Python, NLP, Scikit-learn, HDBSCAN, t-SNE, TF-IDF — May 2026

- Classified 200K+ news headlines into 11 topic categories at 80% accuracy and F1-score of 0.76 using Sentence Transformers and Logistic Regression, outperforming Random Forest.
- Applied HDBSCAN clustering, text preprocessing, and t-SNE visualization to identify hidden topic patterns and improve large-scale text analysis.

DJIA Time Series Forecasting — Python, SARIMA, Prophet, Pandas, Statsmodels — April 2026

- Forecasted 10+ years of DJIA market data (2,700+ records) by building and comparing SARIMA and Prophet models in Python, applying stationarity testing, ACF/PACF analysis, and first differencing to prepare time series data.
- Prophet outperformed SARIMA with RMSE of 1,519 and MAE of 1,283 compared to SARIMA RMSE of 2,839, demonstrating stronger long-range trend capture for financial market forecasting.

Credit Risk & Loan Default Prediction — Python, Scikit-learn, Pandas, NumPy — March 2026

- Predicted loan default risk across 390K+ borrower records using Logistic Regression, KNN, and SVM, with KNN achieving 77.87% accuracy and Logistic Regression providing more balanced default detection across both classes.
- Evaluated Logistic Regression, KNN, and Linear SVM using precision, recall, and F1-score, selected Logistic Regression as most suitable for real-world credit risk as KNN struggled to detect defaults with F1-score of only 0.23.

PROFESSIONAL EXPERIENCE

Finance Analyst | Jeelani Industries — Karachi, Pakistan — November 2023 – December 2024

- Used Python, SQL, Excel, and Power BI to analyse financial and operational data, automate monthly reporting workflows, and reduce reporting time by 30%.
- Built KPI dashboards and performed variance analysis to support operational planning, financial reporting, and data-driven business decision-making.

Founder & Finance Manager | TD Enterprise — Karachi, Pakistan — September 2018 – August 2022

- Used Excel, SQL, and Power BI to analyse pricing, revenue trends, and business performance metrics, helping grow the client base by 30% through data-driven decisions.
- Managed budgeting, reporting, and operational planning while improving delivery timelines by 25% through process optimization and performance tracking.
